

HEAT PUMP

HOT WATER TO STEAM

Incineration Plant

Process Exhaust Gases

Engine Jacket Water

Fossil Fuel Fired Boiler

MNK[®]
ENERJİ

You no longer need

to waste your low-temperature hot gases or hot water.

We have a solution

Normally the Carnot cycle is using in refrigerators with screw compressors. Thanks to the new-developed high-temperature working fluid compressors, generating the low-pressure steam with high COP is now possible.

High COP Rates

with efficient Carnot Cycle

High Heat Recovery

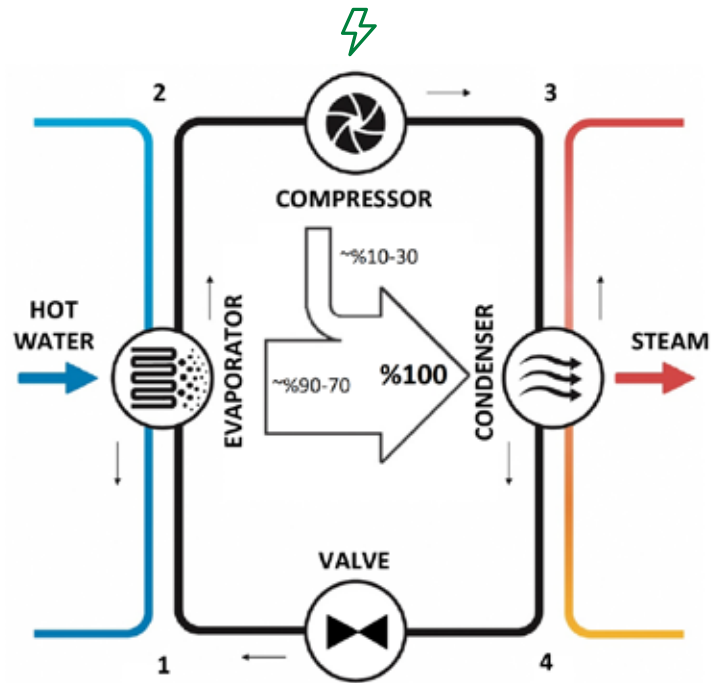

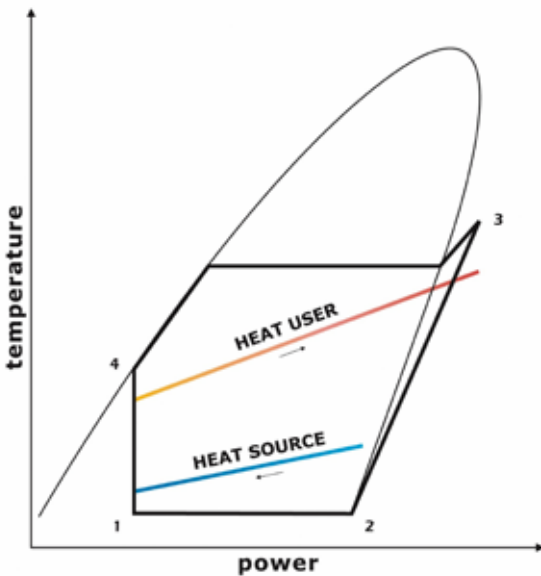

by thermoplastic, stainless steel tubes even with condensing economizer.

Long Life

is ensured by operating low-speed compressor and corrosion free organic medium.

Easy Operation

Fully automatic
